**"Sparrow Conservation: Today's Need"**

Sparrows are small yet attractive birds. This kind is found all over the world including India. The sparrow is a very useful bird. Its sparrow has small wings. Its body is yellow and the colour of its feet is brown. Its body is light greyish-black. This sparrow and several sparrow are different in appearance. Sparrows are so numerous that they eat and grow fast. Sparrows generally build their nests in the roof of houses. Buildings built with mud instead of brick. So sparrows. This birds often nest in the houses of humans.

Sparrows are found in all climates. This sparrow is 4 to 7 yrs. This birds usually fly at a speed of about 50 miles per hour. Sparrows usually like to live in flocks. This birds are noisy and in full voice. Now a days due to different reasons, number of sparrows are reducing day by day. Gradually the beautiful bird has started disappearing. So I spend awareness about sparrows and its protection. "World Sparrow Day" is celebrated every year on 20 March worldwide. Being social birds, they primary being accompanied in every houses but, humans have not been able to maintain the local pure little birds flock on them. And thanks to that, sparrows are now in jeopardy. This is why we need to celebrate World Sparrow Day.
